

MERMAN

FIREFIGHTER GLOVES ONE SIZE

The MERMAN Firefighter Leather Gloves are designed to provide reliable hand protection during firefighting, emergency response, and rescue operations. Manufactured from durable cow leather with a reinforced multi layer construction, the gloves provide protection against flame, radiant heat, water exposure, and mechanical hazards.

The gloves feature a five finger design that allows good dexterity and grip during demanding operations. The internal structure includes a flame resistant layer, waterproof and breathable barrier, insulation layer, and comfort lining, providing both thermal protection and wearing comfort.

The gloves offer strong resistance against heat, abrasion, cutting, tearing, and puncture hazards. The leather construction provides durability and grip, while reflective details improve visibility during operations.

SPECIFICATIONS

STANDARD SIZES: ONE SIZE

Standard Compliance: EN 659

Construction

Color: Black

Outer shell: Cow leather

Moisture barrier: PTFE

Comfort lining: FR cotton

Construction: Multi layer protective structure

Performance

Abrasion resistance: Palm >2000 N, Back >2000 N

Cut resistance: >25 N

Tear resistance: 85 N

Puncture resistance: 70 N

Dimensions

- Length: 38 cm
- Weight: 500g per pair

Features

- Flame resistant leather construction
- Five finger design for flexibility and dexterity
- Waterproof and breathable barrier
- High resistance to heat and mechanical hazards
- Anti static and chemical resistant properties
- Good grip and abrasion resistance
- Reflective stripe for improved visibility
- Internal hook for convenient carrying
- Compatible with firefighter protective clothing sleeves
